Required system

❑ Broadband Internet connection

A broadband line connection to the Internet is required in order to use the ASD-3W's Internet radio function and firmware update.

❑ Modem

This is a device that is connected to the broadband line to communicate with the Internet. Some are integrated with the router.

❑ Router

- When using the ASD-3W, we recommend you use a router equipped with the following functions:
 - Built-in DHCP (Dynamic Host Configuration Protocol) server
This function automatically assigns IP addresses on the LAN.
 - Built-in 100BASE-TX switch
When connecting multiple devices, we recommend a switching hub with a speed of 100 Mbps or greater.
- When using with a wireless LAN, prepare a broadband router with built-in access point.

❑ Ethernet cable (CAT-5 or greater recommended)

- Use for wired LAN.
- The ASD-3W does not come with an Ethernet cable.
- Some flat type Ethernet cables are easily affected by noise.
We recommend using a normal type cable.

❑ Computer

A computer with the following specifications is required to use a music server:

- OS
Windows® XP Service Pack2, Windows Vista
 - Software (Prepare one of the following.)
 - .NET Framework 1.1 and Windows Media Connect (Windows XP)
 - Windows Media Player ver.11
 - DLNA-compatible server software
 - Internet browser
Microsoft Internet Explorer 5.01 or later
 - LAN port
 - 300 MB or more free disk space
- ※ Free disk space is required to store music and video files. The following sizes are approximate.

Format	Bit rate	Per minute	Per hour
MP3 / WMA MPEG-4 AAC	128 kbps	Approx. 1 MB	Approx. 60 MB
	192 kbps	Approx. 1.5 MB	Approx. 90 MB
	256 kbps	Approx. 2 MB	Approx. 120 MB
WAV (LPCM)	392 kbps	Approx. 3 MB	Approx. 180 MB
	1400 kbps	Approx. 10 MB	Approx. 600 MB
FLAC	1080 kbps	Approx. 7.7 MB	Approx. 464 MB

For connections to the Internet, contact an ISP (Internet Service Provider) or a computer shop.

NOTE

- A contract with an ISP is required to connect to the Internet.
No additional contract is needed if you already have a broadband connection to the Internet.
 - The types of routers that can be used depend on the ISP. Contact an ISP or a computer shop for details.
 - Depending on the server, video files may be displayed, but they cannot be played on the ASD-3W.
- ❑ Others
- If you have an Internet provider contract for a line on which network settings are made manually, make the settings at GUI menu "Setup" – "Network" – "Network Setup" (☞ page 12).
 - With the ASD-3W, it is possible to use the DHCP and Auto IP functions to make the network settings automatically.
 - When using a broadband router (DHCP function), the ASD-3W sets the IP address, etc., automatically.
When using the ASD-3W connected to a network with no DHCP function, make the settings for the IP address, etc., at GUI menu "Setup" – "Network" – "Network Setup" (☞ page 12).
 - The ASD-3W is not compatible with PPPoE. A PPPoE-compatible router is required if you have a contract for a line of the type with which the PPPoE is set.
 - Depending on the ISP with which you have your contract, it may be necessary to make proxy server settings to use the Internet radio function. If you made proxy server settings on the computer to connect to the Internet, make the proxy server settings on the ASD-3W in the same way.

GUI Menu Operations

With the ASD-3W, settings and operations for most functions can be performed by operating while looking at the GUI menus displayed on the monitor screen.

- If you are using a broadband router (DHCP function), there is no need to make the settings at “Setting the IP Address” and “Setting the Proxy”, since the DHCP function is set to “ON” in the ASD-3W’s default settings.
- If the ASD-3W is being used connected to a network without the DHCP function, the network settings must be made. In this case, some knowledge of networks is required. For details, consult a network administrator.
- If you cannot connect to the Internet, recheck the connections and settings (☞ page 8, 9).
- If you do not understand about Internet connection, contact your ISP (Internet Service Provider) or the store from which you purchased your computer.

- **DHCP (Dynamic Host Configuration Protocol)** :
These are systems by which the IP address and other network settings are automatically set for the ASD-3W, computer, broadband router and network devices.
- **DNS (Domain Name System)** :
This is a system for converting the domain names used when browsing Internet sites (for example, “www.denon.jp”) into the IP addresses actually used for communications (for example, “202.221.192.106”).

❑ About the Internet radio function

- Internet radio refers to radio broadcasts distributed over the Internet. Internet radio stations from around the world can be tuned in. The ASD-3W is equipped with the following Internet radio functions:
 - Stations can be selected by genre and region.
 - Internet radio stations in MP3 and WMA (Windows Media Audio) format can be listened to.
 - Your favorite radio stations can be registered by accessing an exclusive DENON Internet radio URL from a Web browser on a computer.
 - ※ The function is managed for individual users, so you must provide your MAC or e-mail address.
 - Exclusive URL: <http://www.radiodenon.com>
- The ASD-3W's Internet radio station list is created using a radio station database service (vTuner). This database service provides a list edited and created for the ASD-3W.
 - ※ The radio station database service may be suspended without notice.

❑ Music server

This function lets you play music files and playlists (m3u, wpl) stored on a computer (music server) connected to the ASD-3W via a network.

With the ASD-3W's network audio playback function, connection to the server is possible using one of the technologies below.

- Windows Media Player Network Sharing Service
- Windows Media DRM10

[Album art function]

When a WMA (Windows Media Audio), MP3 or MPEG-4 AAC file includes album art data, the album art can be displayed while the music files are playing.

For music files in WMA (Windows Media Audio) format, the album art is only played when using Windows Media Player ver. 11.

[Slide show function]

Still picture (JPEG) files stored in folders on a music server can be played as slide shows.

The time for which each picture is displayed can be set.

When still picture (JPEG) files are played on the ASD-3W, they are played in the direction in which they are stored in the folder, so store in them in the direction in which you want them to play.

Installing Windows Media Player ver. 11

- ① If Windows XP Service Pack 2 has not yet been installed, either download it free of charge from Microsoft or install it via a Windows update installer.
 - ② Download the latest version of Windows Media Player ver. 11, either directly from Microsoft or using a Windows update installer.
- ※ When using Windows Vista, there is no need to download a new version of Windows Media Player.

There are many Internet radio stations on the Internet, and the quality of the programs they broadcast as well as the bit rate of the tracks varies widely. Generally, the higher the bit rate, the higher the sound quality, but depending on the communication lines and server traffic, the music or audio signals being streamed may be interrupted. Inversely, lower bit rates mean a lower sound quality but less tendency for the sound to be interrupted.

About Wireless LAN

Wi-Fi®

Wi-Fi Certification assures tested and proven interoperability by the Wi-Fi Alliance, a group certifying interoperability among wireless LAN devices.

IEEE 802.11b

This is one wireless LAN standard set by the 802 working group that establishes LAN technology standards at the IEEE (Institute of Electrical and Electronics Engineers) of the United States. It uses the 2.4 GHz band usable freely without a radio frequency license (ISM band), enabling communications at a maximum speed of 11 Mbps.

The value indicated above is the maximum theoretical value for the wireless LAN standard, and does not indicate the actual data transfer rate.

IEEE 802.11g

This is another wireless LAN standard set by the 802 working group that establishes LAN technology standards at the IEEE (Institute of Electrical and Electronics Engineers) of the United States, and is compatible with IEEE 802.11b. It also uses the 2.4 GHz band, but enables communications at a maximum speed of 54 Mbps.

The value indicated above is the maximum theoretical value for the wireless LAN standard, and does not indicate the actual data transfer rate.

Infrastructure Communications

“Infrastructure Communications” refers to networks using wireless LAN access points. This function can be used to connect to the Internet or a wired LAN via a wireless LAN access point. Wireless LAN access points include wireless broadband routers.

Ad-hoc Communications

Signal transfer through wireless interconnection of computers is referred to as “ad hoc communications.” With such ad hoc communications there is no connection to the Internet. Ad hoc communications are suited for establishing simple temporary networks.

Network Names

(SSID: Security Set Identifier)

When forming wireless LAN networks, groups are formed to prevent interference, data theft, etc. This grouping is done by “SSID” or “Security Set Identifiers.” For further security, a WEP key is set and signal transfer is not possible unless the SSID and WEP key match.

WEP Key (Network Key)

This is key information used for encrypting data when conducting data transfer. On the AVR-4308, the same WEP key is used for data encryption and decryption, so the same WEP key must be set on both devices in order for communications to be established between them.

WPA (Wi-Fi Protected Access)

This is a security standard established by the Wi-Fi Alliance. In addition to the conventional SSID (network name) and WEP key (network key), it also uses a user identification function and encrypting protocol for stronger security.

WPA2 (Wi-Fi Protected Access 2)

This is a new version of the WPA established by the Wi-Fi Alliance, compatible with more secure AES encryption.

WPA-PSK/WPA2-PSK (Pre-shared Key)

This is a simple authentication system for mutual authentication when a preset character string matches on the wireless LAN access point and client.

Passphrase

This refers to the code key used for WPA-PSK/WPA2-PSK authentication, a WPA authentication method.

TKIP (Temporal Key Integrity Protocol)

This is a network key used for WPA. The encryption algorithm is RC4, the same as for WEP, but the security level is increased by changing the network key used for encryption for each packet.

AES (Advanced Encryption Standard)

This is a next generation standard encryption method replacing the current DES and 3DES, and because of its high security it is expected to be applied widely to wireless LANs in the future. It uses the “Rijndael” algorithm developed by two Belgian cryptographers to divide the data into blocks of fixed lengths and encrypt each block. It supports data lengths of 128, 192 and 256 bits and key lengths of 128, 192 and 256 bits as well, offering extremely high encryption security.

Troubleshooting

If a problem should arise, first check the following:

1. Are the connections correct?
2. Is the set being operated as described in the owner's manual?
3. Are the other components operating properly?

If this unit does not operate properly, check the items listed in the table below. Should the problem persist, there may be a malfunction.

In this case, disconnect the power immediately and contact your store of purchase.

Restart and Reset Operations

If a fault occurs during use of the ASD-3W, for example, if you cannot connect to a network although the network settings are correct, or the iPod cannot be detected or the remote control unit does not work, you may be able to resolve the problem by taking the following action.

- ❑ **Unplug the ASD-3W's AC adapter from the wall socket and wait for about 30 seconds before plugging it back in (restart operation)**

- ❑ **Reset the ASD-3W**

Use the reset operation when you want to restore the default settings or when the restart operation has failed to resolve a fault.

NOTE

When you reset the ASD-3W, your settings will be returned to the default values. Please be aware that resetting the ASD-3W will erase all your settings, including the stations registered in your Favourites and your Recently Played list.

[How to reset the ASD-3W]

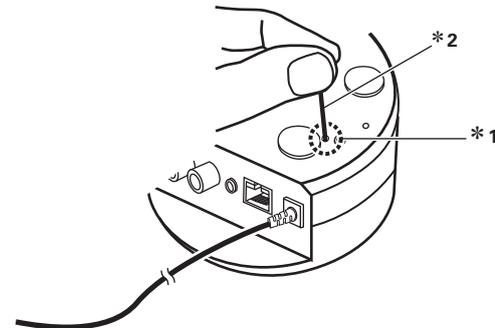

Insert a thin, pointed object (* 2) into the reset hole (* 1) and press the reset button inside the ASD-3W.

- The ASD-3W will restart automatically. The GUI screen will appear and the reset operation will be complete.

※To press the reset button inside the ASD-3W use a thin, pointed object such as a toothpick or an unfolded paper clip.
