Important Changes to System Configuration

AVR-X7200W

HDCP 2.2 Upgrade

April 2015

1. Specification changes after Upgrade

Added support for HDCP 2.2 copy protection

2. Important notice about changes to your AVR-X7200W after the upgrade has been performed

The AVR-X7200W will need to be setup as new after this upgrade; all user settings (backup memory) will be erased. Previous settings saved using the web interface (save and load function) will no longer work.

For example, all settings listed below will be deleted:

- Registration for vTuner (www.radiodenon.com)
- Setting of "Auto Setup"
- Setting of "Speaker Configuration"
- Setting of "Audyssey Pro"
- Quick Select
- Network connection settings
- Last Function Memory
- Installer setup data
- All other settings

Since all above settings will be deleted, customers will need to reconfigure the unit upon completion of the upgrade: For Audyssey Pro Calibration, your Custom Integrator will need to be called for recalibration.

3. Warranty period:

Original term of warranty will continue even after this upgrade.
(Will not be extended)

4. Note on HDCP2.2

To enjoy content that is protected by HDCP 2.2, use source devices and a display compatible with HDCP 2.2.

5. Others

Once upgraded, the unit cannot revert back to original.
