

AVR-4806CI

THX Ultra2 Certified 7.1-channel A/V Surround Receiver

Denon's AVR-4806CI has technology, the reference sound quality and an extensive feature set, that previously was only available on its critically acclaimed sibling, the AVR-5805. But it also stands alone with the introduction of some exciting new technologies, not found on any previously released Denon receivers. The AVR-4806CI is the first product from Denon to offer XM Satellite Radio Ready 'Connect and Play' capability. And for the ultimate in connection flexibility and ease of use, the AVR-4806CI is the first A/V receiver to offer Analog Video to digital HDMI output conversion, which allows all video sources input through the AVR-4806CI to be output on one HDMI cable. The highly regarded Audyssey MultEQ setup system is included, to give more realism and higher sound reproduction to any environment the AVR-4806CI may be installed. Denon original technologies are present as well, DDSC-Digital, AL24 Processing Plus and the latest Denon Link 3rd digital interface.

Moreover, AVR-4806CI is equipped with various network functions such as internet radio, audio streaming and A/V amplifier network Setup.

■ 'New DDSC-Digital,' for dramatically improved processing performance

The New DDSC (Dynamic Discrete Surround Circuit)- Digital is a high-quality surround sound reproduction circuit designed by Denon, and forms the core of the design concept that Denon pursues for all its A/V amps: to faithfully reproduce the original intent of content producers. Denon has succeeded in developing a fully discrete design for the New DDSC-Digital in which high-performance ICs are used in independent blocks to form a signal processor that reproduces surround sound, and the discrete design ensures that all channels are endowed with identical response and quality of sound.

Video Section

■ Video Up/Down Conversion capable of output to HDMI port

The AVR-4806CI includes a video up/down conversion function that allows the unit to be connected to the video monitor via a single cable regardless of the video input signal's format as follows:

- 1) Composite video signals are converted to HDMI (*1), component video, & S-video;
- 2) S-video signals are converted to HDMI (*1), component video, & composite video;
- 3) Component video signals are converted to HDMI (*1), composite video (*2), & S-video (*2).

*1. Output signal up-converted to HDMI retains the resolution of the input signal.

*2. Down-conversion from component video to composite or S-video applies only to 480i input signals.

■ 1080p upscaling

■ Component video switching

The AVR-4806CI is equipped with 3 sets of component video inputs. There are also 2 sets of component video outputs capable of simultaneous output, allowing component video with high picture quality to be enjoyed on two monitors at the same time. Settings do not need to be changed each time a monitor is switched. These component video circuits achieve sharp HDTV video quality in a frequency range up to 100 MHz.

■ High-speed, high-accuracy 12-bit/216-MHz Video DAC

A high-speed, high-accuracy 12-bit/216-MHz video DAC is used in the video circuitry for component video, S-video, and composite video signals. This DAC enhances the reproducibility of delicate-level video signals, allowing high-definition video to be played back with greater fidelity to the original images. In addition, noise shaped video (NSV) technology improves video S/N for greater signal linearity.

■ Composite and S-video signal processing

The AVR-4806CI uses a time base corrector (TBC) in converting composite video & S-video signals to component video to suppress jitter in the video signal during playback.

Expandability

■ Analog EXT IN terminal

■ 3 Source and Zone Capability

■ Ethernet and RS-232C terminals, for external 3rd party control system

The AVR-4806CI's Ethernet and RS-232C ports provide support for serial control using AMX, Crestron and others.
