NOTE: The ASD-3N/W and ASD-51N/W have their own Graphic User Interface via the S-Video output, which meta-data and album art is displayed on the TV when the ASD-XXN/W is selected as the source in all applications, however as noted above, some AVRs can display meta-data via the Dock Control cable. The ASD-1/11R docks use the Dock Control cable as the only output for meta-data for all applications, the S-video output is for iPod video and photo transmission to the AVR.

****Some models do not have an OSD (On Screen Display) or GUI (Graphic User Interface). Please check your model's Product Specification Sheet or the Owners Manual to verify this function.**
